## Introduction

---

### Exercise 1.

- (a) Factor  $2^{15} - 1 = 32,767$  into a product of two smaller positive integers.
- (b) Find an integer  $x$  such that  $1 < x < 2^{32,767} - 1$  and  $2^{32,767} - 1$  is divisible by  $x$ .

*Solution.* The proof of Theorem 1 shows that  $2^n - 1 = xy$ , where  $x := 2^b - 1$  and  $y := 1 + 2^b + 2^{2b} + \dots + 2^{(a-1)b}$ , and that  $2^n - 1 = 2^{ab} - 1$ , which implies  $n = ab$ .

- (a) If  $n = 15 = 3 \cdot 5$ , we can take  $a = 3$  and  $b = 5$ . Therefore,  $x = 2^5 - 1 = 31$  and  $y = 1 + 2^5 + 2^{2 \cdot 5} = 1057$ , and thus  $2^{15} - 1 = 31 \cdot 1057 = 32,767$ .
- (b) If  $n = 32,767 = 7 \cdot 4,681$ , we can take  $b = 7$ . Therefore,  $x = 2^7 - 1 = 127$ , which is clearly a divisor of  $2^{32,767} - 1$  and necessarily less than  $2^{32,767} - 1$ .  $\square$

**Exercise 2.** Make some conjectures about the values of  $n$  for which  $3^n - 1$  is prime or the values of  $n$  for which  $3^n - 2^n$  is prime.

*Solution.* By looking at [Table 1](#), we can make the following conjecture about  $3^n - 1$ :

**Conjecture.** *If  $n$  is an integer greater than or equal to 1, then  $3^n - 1$  is even.*

By looking at [Table 2](#), we can make the following two conjectures about  $3^n - 2^n$ :

**Conjecture.** *If  $n$  is an integer greater than 1 and is prime, then  $3^n - 2^n$  is prime.*

**Conjecture.** *If  $n$  is an integer greater than 1 and is not prime, then  $3^n - 2^n$  is not prime.* □

| $n$ | Is $n$ prime? | $3^n - 1$ | Is $3^n - 1$ prime? |
|-----|---------------|-----------|---------------------|
| 1   | no            | 2         | yes                 |
| 2   | yes           | 8         | no                  |
| 3   | yes           | 26        | no                  |

# 1 Sentential Logic

---

## 1.1 Deductive Reasoning and Logical Connectives

**Exercise 1.** Analyse the logical forms of the following statements:

- (a) We'll have either a reading assignment or homework problems, but we won't have both homework problems and a test.
- (b) You won't go skiing, or you will and there won't be any snow.
- (c)  $\sqrt{7} \not\leq 2$ .

*Solution.* The logical forms are:

- (a)  $(R \vee H) \wedge \neg(H \wedge T)$ , where  $R$  stands for “we will have a reading assignment”,  $H$  for “we will have homework problems”, and  $T$  for “we will have a test”.
- (b)  $\neg G \vee (G \wedge \neg S)$ , where  $G$  stands for “you will go skiing” and  $S$  for “there will be snow”.
- (c)  $\neg((\sqrt{7} < 2) \vee (\sqrt{7} = 2))$ . □

**Exercise 2.** Analyse the logical forms of the following statements:

- (a) Either John and Bill are both telling the truth, or neither of them is.
- (b) I'll have either fish or chicken, but I won't have both fish and mashed potatoes.
- (c) 3 is a common divisor of 6, 9, and 15.

*Solution.* The logical forms are:

- (a)  $(J \wedge B) \vee \neg(A \vee B)$ , where  $J$  stands for “John is telling the truth” and  $B$  for “Bill is telling the truth”.
- (b)  $(F \vee C) \wedge \neg(F \wedge M)$ , where  $F$  stands for “I will have fish”,  $C$  for “I will have chicken”, and  $M$  for “I will have mashed potatoes”.
- (c)  $A \wedge B \wedge C$ , where  $A$  stands for “3 divides 6”,  $B$  for “3 divides 9”, and  $C$  for “3 divides 15”. □

**Exercise 3.** Analyse the logical forms of the following statements:

- (a) Alice and Bob are not both in the room.
- (b) Alice and Bob are both not in the room.
- (c) Either Alice or Bob is not in the room.
- (d) Neither Alice nor Bob is in the room.

*Solution.* Let  $A$  stand for “Alice is in the room” and  $B$  for “Bob is in the room”. Then, the logical forms are:

(a)  $\neg(A \wedge B)$ .

(b)  $\neg A \wedge \neg B$ .

(c)  $\neg A \vee \neg B$ .

(d)  $\neg A \wedge \neg B$ .

□

## 1.2 Truth Tables

**Exercise 1.** Make truth tables for the following formulae:

(a)  $\neg P \vee Q$ .

(b)  $(S \vee G) \wedge (\neg S \vee \neg G)$ .

*Solution.* The truth tables are:

(a)

| $P$ | $Q$ | $\neg P \vee Q$ |
|-----|-----|-----------------|
| T   | T   | T               |
| T   | F   | F               |
| F   | F   | T               |
| F   | T   | T               |

(b)

| $S$ | $G$ | $(S \vee G) \wedge (\neg S \vee \neg G)$ |
|-----|-----|--|
| T   | T   | T  |
| T   | F   | F  |

□

## 2 Quantificational Logic

---

### 2.1 Quantifiers

**Exercise 1.** Analyse the logical forms of the following statements:

(a) Anyone who has forgiven at least one person is a saint.

(b) Nobody in the calculus class is smarter than everybody in the discrete maths class.

(c) Everyone likes Mary, except Mary herself.

(d) Jane saw a police officer, and Roger saw one too.

(e) Jane saw a police officer, and Roger saw him too.

*Solution.* The logical forms are:

- (a) Todo.
- (b) Todo.
- (c) Todo.
- (d) Todo.
- (e) Todo.

□

## 3 Proofs

---

### 3.1 Proof Strategies

**Exercise 1.** Consider the following theorem. (This theorem was proved in the introduction.)

**Theorem.** *Suppose  $n$  is an integer larger than 1 and  $n$  is not prime. Then  $2^n - 1$  is not prime.*

- (a) Identify the hypotheses and conclusion of the theorem. Are the hypotheses true when  $n = 6$ ? What does the theorem tell you in this instance? Is it right?
- (b) What can you conclude from the theorem in the case  $n = 15$ ? Check directly that this conclusion is correct.
- (c) What can you conclude from the theorem in the case  $n = 11$ ?

*Solution.*

- (a) Todo.
- (b) Todo.
- (c) Todo.

□
